

Process & Decision Documentation

Project/Assignment Decisions

For Side Quest 6 I only modified the Example 5 starter project by replacing the original assets with new sprite sheets, sound effects, and background visuals. I changed the player character, enemy character, and collectible object to use different sprite sheets. I also added sound effects for player actions and background music. These changes required updating asset loading, modifying variable names, and ensuring the new assets matched the existing animation and game logic structure.

Tool Disclosure: Non

Summary of Process (Human + Tool)

- Reviewed the Example 5 starter code to understand the existing structure
- Replaced the player, enemy, and collectible sprite sheet with a new one
- Updated asset loading paths and variable names to match the new assets
- Added sound effects for jumping, collecting items, damaging enemies, and player damage, and looping background music
- Tested the game to ensure animations, sound playback, and gameplay interactions worked correctly.
- Moments of rework: Reworking the size of the online sprite sheets to fit like the original

Decision Points & Trade-offs

- Options Considered:
 - I selected a wizard character for the player and a robot for the enemy to create a cross from fantasy to modern world theme
 - I added sound effects to improve player feedback for actions like jumping and collecting items
 - Background music was added to enhance the atmosphere of the game

Verification & Judgement

- Rereading assignment criteria
- Testing the iterations manually
- Comparing code structure to example code
- Re-reading assignment criteria
- Ran the game locally to confirm assets loaded correctly
- Verified that sprite sheet animations aligned with the existing animation system

- Tested that sound effects triggered correctly when gameplay events occurred
- Confirmed the game could restart and complete levels without errors

Limitations, Dead Ends, or Open Questions

- Always be specific when sending in the prompts so it doesn't misunderstand
